

VISVESVARAYA TECHNOLOGICAL UNIVERSITY

JNANA SANGAMA, BELAGAVI – 590018

INTERNSHIP REPORT

ON

**“HOSTELMATE CLI: HOSTEL ROOM ALLOCATION AND
FEE MANAGEMENT SYSTEM”**

**Submitted for partial fulfillment of the requirement for the award of the
Bachelor degree in Computer Science and Engineering during the year 2026.**

Submitted by

MADEGOWDA N - 4CA22CS041

Under the Guidance of

Prof. RADHIKA K P

Assistant Professor

Dept. Computer Science and Engineering

CIT, Mandya

CERTIFICATE

This is to Certify that the internship project entitled **“HOSTELMATE CLI: HOSTEL ROOM ALLOCATION AND FEE MANAGEMENT SYSTEM”** is a bonafied work carried out by **MADEGOWDA N**, bearing USN **4CA22CS041** in partial fulfilment for the degree of 8th Semester, Bachelor of Engineering in Computer Science and Engineering of the Visvesvaraya Technological University, Belagavi during the year **2025-26**. It is certified that all corrections or suggestions indicated for internship project have been incorporated on the report deposited in departmental library. This internship project report has been approved as it satisfies the academic requirements in respect of the internship project prescribed for the Bachelor of Engineering Degree.

OFFER LETTER

Agasthya EdTech Pvt. Ltd.

To,
Madegowda N

Date: 22 December 2025

Internship Offer Letter

Subject: Internship Offer Letter – MERN Stack Developer, leveraging Gen AI

Dear,

Thank you for exploring internship opportunities with ABC Tech, through the VTU Internship Portal. We are pleased to offer you an internship with our organization.

This internship will run for 13 to 15 weeks as per VTU Guidelines. The internship will provide you with hands-on exposure through guided tasks, structured modules, and practical projects at the ABC Tech facility.

During the internship, you will be engaged in product application development, supporting feature implementation, testing, preparing documentation, and cross-functional collaboration. These activities will require you to apply your technical knowledge and demonstrate your professional skills effectively. All internship policies and professional guidelines will be provided in the Internship Manual, which will be shared with you on the day of program commencement.

As part of the process, you are required to:

- Print this offer letter and fill in the Faculty Coordinator details below.
- Obtain HoD/Internship Coordinator signature with seal.
- Email the scanned copy back to us before 9th January, 2026.

We look forward to your participation and wish you a productive internship.

Warm regards,

Manjunath Aradhya

Founder Director & CEO
ABC Technology Training & Upskilling
powered by Agasthya Edtech Pvt. Ltd.

Authorization from Internship In-charge Faculty or HoD

Name: Rakshitha BH

Contact No.: 8217429162

Designation: Asst. Prof. & HoD

MANDYA.

COURSE COMPLETION CERTIFICATE

CERTIFICATE OF INTERNSHIP

This is to certify that

Madegowda N

Technology Training & Upskilling

has successfully completed a
3-month internship in
MERN Web Development Foundation Course

13/05/2026

DATE

A handwritten signature in blue ink, appearing to read 'M-J-A', enclosed within a blue triangular outline.

Mr. Manjunath Aradhya
Founder & CEO
ABC Technology Training & Upskilling
powered by Agasthya Edtech Pvt. Ltd.

ACKNOWLEDGMENT

The time I spent at ABC Technology as an intern from 2nd February 2026 to 10th May 2026 was a highly enriching experience that significantly improved my understanding of Java and SQL. I would like to express my sincere gratitude to everyone who made this internship a valuable learning journey.

My sincere thanks to ABC Technology for providing me with the opportunity to intern under such a dynamic and learning-focused environment. I would also like to thank the mentors and training team at ABC Technology for their continuous guidance and support throughout the internship.

I would like to thank **Dr. SRIKANTAPPA A S** Principal, Cauvery Institute of Technology, Mandya, for enabling us to take up this internship.

I would like to express my sincere gratitude to **Prof. ARPITHA S K Assistant Professor & HOD**, Department of Computer Science & Engineering, for her guidance and support, which helped me gain valuable insights during the internship.

I consider it a privilege to thank **Prof. RADHIKA K P Assistant Professor**, Internship Coordinator, Department of Computer Science & Engineering, for her constant support and coordination throughout the internship duration.

Finally, I would like to thank my family and friends whose encouragement and support were invaluable throughout this journey.

MADEGOWDA N
4CA22CS041

CHAPTER 1

INTRODUCTION

Internship is an important part of academic learning that helps students gain practical exposure to real-time industry environments. It enables students to apply theoretical concepts, improve technical knowledge, and develop professional skills required in the software industry. Through internships, students gain experience in project development, teamwork, problem-solving, and software implementation using modern technologies and tools.

I completed my internship at ABC Technology, where I worked on a project titled “HostelMate CLI – Hostel Room Allocation And Fee Management System.” The project is designed to automate hostel-related operations such as registering student details, managing room allocation and vacancy, recording fee payments, and maintaining hostel records in an organized manner. It aims to reduce manual work, improve accuracy, and provide a simple and user-friendly system for hostel administration.

The project was developed using Java and MySQL database technologies. During the internship, I gained hands-on experience in object-oriented programming, database connectivity, CRUD operations, authentication systems, and software testing. The internship helped me understand the complete software development process including requirement analysis, coding, debugging, database management, and project execution.

1.1 Company Overview

The organization is involved in software publishing, consultancy, and computer-related activities. The company aims to bridge the gap between academic learning and industry requirements by offering practical exposure to modern technologies and real-time project development.

Agastya EdTech Private Limited provides opportunities for students and trainees to enhance their technical knowledge through internships, project-based learning, and hands-on experience in software development. The company encourages innovation, problem-solving, teamwork, and professional growth among students and employees.

1.2 Duration of the Internship

The total duration of the internship is 15 weeks, conducted in an online mode.

CHAPTER 2

COMPANY PROFILE

Company Name : Agasthya EdTech Private Limited

Agasthya EdTech Private Limited is a technology-driven organization focused on providing quality technical education, internship programs, and software development training for students. The company aims to bridge the gap between academic learning and industry requirements by offering practical exposure to real-world technologies and project development. Agasthya EdTech Private Limited provides training and development opportunities in various domains such as Java Programming, Web Development, Database Management, Machine Learning, Artificial Intelligence, and Software Development technologies. The internship programs are designed with a practical learning approach that includes live project work, coding assignments, technical mentoring, and hands-on implementation.

Company Details

- **Industry** : Skill Development
- **Type** : Private
- **Mode** : Online Internship Program
- **Focus Areas** : JAVA, SQL
- **Services**: Internship Training, Project-Based Learning, Skill Development

Fig 2.1: Logo of Agasthya EdTech Private Limited

2.1 About the Company

Agasthya EdTech Private Limited is a technology-oriented organization that focuses on providing technical education, internship opportunities, and software development training for students and aspiring professionals. The company aims to bridge the gap between academic knowledge and industry requirements by offering practical exposure to modern technologies and real-time project development.

The organization provides hands-on learning experiences through internships, live projects, technical workshops, and skill development programs. Agasthya EdTech Private Limited encourages innovation, teamwork, and continuous learning to help students enhance their technical and professional abilities. The company also supports students in gaining practical knowledge in software development, programming, database management, and emerging technologies.

During the internship, students are exposed to industry-oriented practices that help them improve problem-solving skills, analytical thinking, and project implementation capabilities. The company plays an important role in preparing students for careers in the IT industry through quality training and professional guidance.

2.2 Vision and Mission

Vision

To become a leading educational technology company that empowers students with practical technical knowledge, industry-oriented skills, and innovative learning opportunities to build successful careers in the IT industry.

Mission

- To provide high-quality internship programs and technical training for students.
- To bridge the gap between theoretical learning and practical industry requirements.
- To encourage innovation, creativity, and problem-solving skills through real-time project development.
- To equip students with modern technological knowledge and professional competencies required in the software industry.
- To support continuous learning and career development through industry-focused education and mentorship.

2.3 Services Offered

Agasthya EdTech Private Limited offers various educational and technical services aimed at enhancing students' knowledge and employability skills. The major services offered by the company include:

- Internship programs in software development and emerging technologies.
- Technical training in Java, Python, Web Development, Database Management, and related domains.
- Real-time project development and hands-on practical learning.
- Career guidance and skill development programs for students.
- Workshops, seminars, and technical mentoring sessions.
- Software development and IT-related consultancy services.
- Training on problem-solving, programming concepts, and industry-oriented tools and technologies.

2.4 Technologies and Domains

The major technologies and domains involved in the project include:

- **Java Programming:** Used for developing the complete application logic and implementing object-oriented programming concepts.
- **Object-Oriented Programming (OOP):** Concepts such as classes, objects, inheritance, encapsulation, and polymorphism were used in project development.
- **MySQL Database:** Used for storing student details, room information, room allocation records, fee payment details, and hostel reports in an organized manner.
- **JDBC (Java Database Connectivity):** Used to establish communication between the Java application and MySQL database for performing database operations efficiently.
- **Command Line Interface (CLI):** The project was developed as a menu-driven command-line application to provide easy interaction for managing hostel operations.
- **CRUD Operations:** Implemented functionalities for creating, reading, updating, and deleting student records, room details, allocations, and payment information.
- **Validation and Security:** Validation mechanisms were implemented to prevent multiple room allocation for a single student, avoid exceeding room capacity, and ensure proper management of hostel data.

2.5 Learning Approach

During the development of the HostelMate CLI – Hostel Room Allocation and Fee Management System, the learning approach included:

- Understanding project requirements and system design.
- Practical implementation of Java programming concepts through coding activities.
- Developing database connectivity using JDBC and SQL.
- Learning real-time software development practices such as debugging, testing, and error handling.
- Implementing automated hostel management activities such as student registration, room allocation, room vacancy management, and fee payment tracking.
- Improving problem-solving skills through project tasks and technical guidance.
- Gaining experience in project documentation, teamwork, and professional communication.

This practical learning approach helped in improving technical knowledge, coding skills, analytical thinking, and understanding of real-world software development processes.

CHAPTER 3

OBJECTIVE OF THE INTERNSHIP

The primary objective of the internship at Agasthya EdTech Private Limited was to gain practical exposure to real-world software development and understand how theoretical concepts learned during academics are implemented in industry-level projects. The internship provided an opportunity to bridge the gap between academic learning and professional requirements by working on practical tasks and real-time project development activities.

Another important objective of the internship was to improve technical knowledge in Java programming, object-oriented programming concepts, database management, and software application development. Through the development of the project “HostelMate CLI – Hostel Room Allocation and Fee Management System,” the internship focused on building a command-line based application capable of managing student information, room allocation details, hostel occupancy records, fee payment tracking, and report generation efficiently. This helped in understanding the practical implementation of programming concepts and database operations in software systems.

The internship also aimed to enhance problem-solving abilities, debugging techniques, logical thinking, and analytical skills through hands-on coding activities and project implementation. By working with technologies such as Java, SQL, JDBC, and command-line interfaces, practical experience was gained in database connectivity, CRUD operations, authentication mechanisms, error handling, and software testing. The internship helped in understanding different stages of the software development life cycle including requirement analysis, coding, testing, and project documentation.

In addition to technical learning, the internship aimed to develop professional skills such as communication, teamwork, time management, and project coordination. Working under the guidance of mentors and collaborating on project tasks helped in understanding professional work culture and industry-oriented development practices. The internship experience also improved confidence in handling real-time technical challenges and strengthened the ability to work independently on software projects.

Overall, the internship provided valuable exposure to practical software development, enhanced technical and professional competencies, and contributed significantly to career preparation in the field of information technology and software engineering.

CHAPTER 4

DETAILED WORK EXPERIENCE

4.1 Learning and Internship Activities

The activities included understanding project requirements and developing different modules of the HostelMate CLI – Hostel Room Allocation and Fee Management System. The project is designed to automate hostel-related operations such as registering student details, managing room allocation and vacancy, recording hostel fee payments, and maintaining hostel records in an organized manner. It aims to reduce manual work, improve accuracy, and provide a simple and user-friendly system for hostel administration.

The internship helped in improving coding skills, problem-solving abilities, analytical thinking, and understanding of software development practices. In addition, experience was gained in project documentation, teamwork, communication, and professional work culture through continuous guidance and project review activities.

4.2 Project Work: HostelMate CLI – Hostel Room Allocation and Fee Management System.

The project “HostelMate CLI – Hostel Room Allocation and Fee Management System” is a command-line based application developed to simplify and automate hostel management activities such as student registration, room allocation, room vacancy management, fee payment tracking, and hostel record maintenance. The system provides an efficient platform for managing hostel-related data in an organized manner while reducing manual paperwork and human errors.

The application allows administrators to add, update, search, and delete student details along with managing room information and hostel allocation records. It also supports functionalities such as room allocation, room vacancy management, fee payment recording, and occupancy tracking. The project was developed using programming concepts like Object-Oriented Programming (OOP), database connectivity using JDBC and MySQL, collections, and exception handling to ensure smooth system operations.

This project helped in gaining practical experience in backend development, logical problem-solving, and real-world application design. The command-line interface makes the system

lightweight, simple, and easy to operate while improving understanding of software development processes and transport management systems.

The system works through a Command Line Interface (CLI), where the administrator interacts with the application using menu-driven options. When the application starts, the user is provided with different functionalities such as registering student details, adding room information, allocating rooms, vacating rooms, recording fee payments, viewing room occupancy, and checking unpaid student records. Each operation is performed through user inputs entered via the console.

The project stores and manages data related to students, rooms, allocations, and hostel fee payments. Student details such as name, student ID, course, year, and contact information are maintained within the system. The room management module handles information about room numbers, room type, capacity, occupancy count, and monthly rent. The allocation module manages room assignment for students and helps in tracking room occupancy and vacancy status.

The application is developed using programming concepts such as Object-Oriented Programming (OOP), where classes and objects are used to represent entities like students, rooms, allocations, and payments. Database connectivity using MySQL and JDBC is used for storing records permanently, ensuring that data can be retrieved, updated, and managed efficiently whenever required. Exception handling techniques are implemented to manage invalid inputs, database errors, and runtime exceptions, making the application more reliable and user-friendly.

CHAPTER 5

TECHNOLOGIES LEARNED

During the internship at Agasthya EdTech Private Limited, various technologies, programming concepts, and software development practices were learned through the development of the project “HostelMate CLI – Hostel Room Allocation and Fee Management System” The internship provided hands-on experience in developing a real-time command-line based hostel management application and helped in understanding practical implementation of software engineering concepts.

The primary technology used in the project was Java Programming, which was utilized to build the complete application logic and user interaction modules. Through this project, practical knowledge was gained in core Java concepts such as classes, objects, methods, constructors, loops, conditional statements, arrays, collections, exception handling, and file handling. The project also helped in strengthening the understanding of Object-Oriented Programming (OOP) concepts including encapsulation, inheritance, abstraction, and polymorphism for developing modular, reusable, and maintainable applications.

The project involved the use of MySQL Database for efficient storage and management of student information, room details, allocation records, fee payment details, and hostel reports. Practical exposure was gained in creating database tables, writing SQL queries, and performing database operations such as insertion, updation, deletion, and retrieval of records. JDBC was used to establish communication between the Java application and the MySQL database, enabling smooth execution of CRUD operations and data management processes.

The system displays various options such as registering student details, adding room information, allocating rooms, vacating rooms, recording hostel fee payments, viewing room occupancy, searching student records, and viewing unpaid student details. The user selects the required operation by entering the corresponding menu option through the console.

During the internship, knowledge was also gained in software development practices such as debugging, testing, exception handling, validation, code optimization, and project documentation. When a new student is registered, the system collects details such as student name, student ID, course, year, contact information, and hostel-related details for room allocation and record management.

These details are validated and stored using database connectivity to ensure proper hostel record management. The room management module maintains room information including room number, room type, capacity, occupancy count, and monthly rent, enabling efficient room allocation and hostel occupancy management for students.

The room allocation module assigns rooms to students based on room availability and student details. The system also checks room occupancy status and prevents multiple room allocation for the same student whenever required. Search and update functionalities allow administrators to quickly retrieve or modify existing student, room, allocation, and fee records without manually checking large amounts of data.

During execution, exception handling mechanisms are implemented to manage invalid inputs, missing records, and runtime errors, ensuring smooth application performance. Collections such as ArrayLists or HashMaps are used internally for efficient data storage and retrieval. The CLI structure makes the application lightweight, easy to navigate, and simple to use without requiring a graphical interface.

Running this project provided practical experience in backend development, logical programming, debugging, testing, and handling real-world transport management scenarios. It also improved understanding of software workflow, data management, and user interaction within a command-line based application environment.

In addition, the internship provided exposure to problem-solving techniques, analytical thinking, logical implementation, and software design approaches. Experience was also gained in understanding the software development life cycle, project workflow, and professional coding standards followed in the IT industry.

Overall, the internship significantly improved technical knowledge in Java application development, database connectivity, hostel system implementation, and real-world software engineering practices. It also enhanced confidence in developing industry-oriented software applications and handling practical project development tasks independently.

CHAPTER 6

SKILLS LEARNED

During the internship at Agasthya EdTech Private Limited, various technical and professional skills were developed through practical exposure to software development and real-time project implementation. The internship provided valuable experience in working on the project “HostelMate CLI – Hostel Room Allocation and Fee Management System,” which helped in improving programming knowledge, analytical thinking, and understanding of industry-oriented development practices.

One of the major skills learned during the internship was Java programming and object-oriented programming (OOP) concepts. Practical experience was gained in developing applications using classes, objects, methods, constructors, loops, conditional statements, collections, and exception handling. Knowledge was also gained in implementing important OOP principles such as encapsulation, inheritance, abstraction, and polymorphism for creating modular, reusable, and maintainable applications. This improved coding standards, logical implementation, and software design understanding.

Another important skill developed during the internship was database management and database connectivity using MySQL and JDBC. Hands-on experience was gained in creating database tables, writing SQL queries, and performing CRUD operations such as inserting, updating, deleting, and retrieving records. JDBC connectivity helped in understanding how Java applications interact with databases for efficient data storage and management. This enhanced practical knowledge in handling real-time data processing operations within software applications.

The internship also helped in improving problem-solving, debugging, and analytical skills through continuous coding practice and project development activities. Experience was gained in identifying logical errors, testing application modules, validating user inputs, and implementing suitable solutions for software-related issues. Practical exposure to debugging and exception handling improved the ability to develop reliable and error-free applications.

A Command Line Interface (CLI) was developed to enable user interaction through menu-driven operations. The project also involved database management techniques using MySQL and JDBC for storing and managing student details, room information, allocation records, and fee payment data securely. Additionally, collections frameworks like ArrayList and HashMap were used for efficient data management, while exception handling techniques helped in managing runtime errors, invalid inputs, and database-related issues. Through this project, knowledge in debugging, testing, backend development, database connectivity, and the overall software development process was significantly improved.

The internship also provided exposure to software development practices and project management techniques such as requirement analysis, code organization, modular programming, testing, documentation, and project execution. Experience was gained in maintaining proper code structure and implementing service-based modules for better maintainability and scalability of the application.

In addition to technical skills, several professional skills were enhanced during the internship, including communication skills, teamwork, time management, adaptability, and professional ethics. Working under the guidance of mentors and collaborating on project-related activities helped in understanding professional work culture and industry standards followed in software companies.

Overall, the internship significantly improved both technical and interpersonal skills, strengthened confidence in software development, and provided practical knowledge required for handling real-world projects and professional responsibilities in the IT industry.

CHAPTER 7

CHALLENGES FACED

During the internship at Agasthya EdTech Private Limited, several challenges were faced while developing the project “HostelMate CLI – Hostel Room Allocation and Fee Management System”. These challenges helped in improving technical knowledge, problem-solving abilities, and practical understanding of software development.

Another challenge was handling file handling or database operations efficiently. Ensuring that data was correctly stored, updated, and retrieved without loss or duplication required proper implementation of read/write operations. At times, issues such as incorrect data formatting, overwriting of records, and difficulty in updating specific entries were faced, which required debugging and restructuring of the storage logic.

Input validation and error handling were also significant challenges in the project. Since the system is CLI-based, users may enter incorrect or unexpected inputs. Handling such invalid inputs without crashing the program required implementing proper exception handling mechanisms. Ensuring smooth execution even when errors occurred was initially difficult but improved with practice and debugging.

Designing a menu-driven Command Line Interface (CLI) application was also challenging, as multiple modules such as student management, room allocation, fee management, occupancy tracking, and authentication had to be integrated efficiently. Ensuring smooth navigation and proper user interaction required continuous testing, debugging, and code improvement.

Handling runtime errors, exception handling, and debugging in Java was another important challenge during the project development process. Identifying logical mistakes and fixing application errors helped in improving debugging and analytical skills.

Despite these challenges, the internship provided valuable practical exposure and helped in enhancing programming skills, technical confidence, and understanding of real-world software development practices.

CHAPTER 8

OUTCOME OF TRAINING

The internship training at Agasthya EdTech Private Limited provided valuable practical exposure to real-world software development and enhanced both technical and professional skills. Through the development of the project “HostelMate CLI – Hostel Room Allocation and Fee Management System,” significant knowledge was gained in Java programming, object-oriented programming concepts, database management, and application development.

The training helped in understanding the practical implementation of software development concepts such as database connectivity using JDBC and MySQL, CRUD operations, exception handling, debugging, and command-line application development. It also improved problem-solving abilities, logical thinking, and analytical skills through hands-on coding and project implementation activities.

The internship provided experience in developing the project also enhanced problem-solving and analytical thinking skills by dealing with real-world transport management scenarios. Working on features like search, update, delete, and pass generation helped in understanding how logic is applied in practical applications. Additionally, experience in debugging and error handling improved the ability to identify and resolve issues effectively, ensuring smooth system performance.

In addition to technical knowledge, the training enhanced professional skills such as communication, teamwork, time management, project documentation, and understanding of professional work culture. The internship also increased confidence in handling real-time software projects independently and applying academic knowledge to industry-oriented applications.

Overall, the training was highly beneficial in improving technical expertise, practical exposure, and career readiness in the field of software development and information technology.

CONCLUSION

The internship at Agasthya EdTech Private Limited was a valuable learning experience that provided practical exposure to real-world software development and industry-oriented working environments. The internship helped in bridging the gap between theoretical knowledge and practical implementation through hands-on project development and technical learning activities.

The project “HostelMate CLI – Hostel Room Allocation and Fee Management System” provided an opportunity to apply programming concepts and software development techniques in developing a functional hostel management application. Through this project, knowledge was gained in Java programming, object-oriented programming concepts, database management using MySQL, JDBC connectivity, CRUD operations, debugging, and command-line application development.

The internship also helped in improving problem-solving abilities, logical thinking, analytical skills, and understanding of software development life cycle processes. Working on different modules such as student management, room allocation, fee management, occupancy tracking, and authentication enhanced both technical knowledge and practical implementation skills.

In addition to technical learning, the internship improved professional skills such as communication, teamwork, time management, adaptability, and project documentation. Guidance from mentors and exposure to professional work culture helped in understanding industry standards and real-time project execution practices.

Overall, the internship was highly beneficial in enhancing technical expertise, practical knowledge, and career readiness in the field of software development and information technology. The experience gained during the internship will be helpful for future academic projects and professional growth in the IT industry.
